Hi again,

I'm reattaching the template as a Word.doc file here as I realize the Drive link may not be downloadable for all.

Hello PREDICT GHSA Team!!!!

Welcome to 2019's reporting season! To kick things off, I am super excited to share our FY19 GHSA semi-annual report template, the first of several tasty recipes we will be cooking up over the several months.

As always, we are responsible for creating content and completing the classic GHSA template, though this time USAID changed the action package table color from grey to green! A festive spring or St. Patrick's Day skin to make this more fun.

GHSA reports are due to HQ Friday March 29th. Hopefully your ongoing partner updates, excellent quality EIDITH data, and planning for the final report and other ongoing promotional needs makes this an easy target.

I'm copying the same guidance from USAID below to help refresh your memories on what this report involves (template, aims, intended use, etc.).

1. *"Summary of Health Security Capacities and Changes in Capacity"* table: complete and highlight progress or achievements that support capacity gains in target Action Packages. I've left last report's content in blue font for a refresher. Please update or remove any irrelevant text and leave the final text in black font.
2. Provide in-depth stories about our successes, challenges, and work in support of outbreak preparedness or response.

The table (#1 above) is essential GHSA business - the M&E report. The in-depth stuff in #2 (success stories, etc.) is where USAID sees value from our reports and they are frequently used and shared by USAID in Washington, country missions, and the interagency GHSA teams. For examples of what USAID likes (stories about people that illustrate impact towards the journey of self reliance), [check out this page](#).

I've also attached the full report we submitted in September 2018 (Drive link as it's a big file) to illustrate how that content was presented to USAID in the final version.

Ancient guidance that may still be helpful....

2019 GHSA report guidance

Period of performance: October 1 - March 31, 2019

1. Summary of Health Security Capacities and Changes in Capacity: Do your best to describe how PREDICT is making an impact and improving capacities towards advancing countries from JEE Levels across each relevant Action

Package and Indicator. Country JEE reports are [available online here](#). We all realize that no one project is going to push a country to a new level in a 12 month period of performance. Our goal is to document how our work is helping make an impact toward that bigger goal.

Note: We will be accompanying content captured in this table with surveillance, behavioral risk, and viral testing data extracted from EIDITH. Please use your USAID EIDITH report extracts when citing numbers from trainings, sampling, testing, or surveys/interviews. Again, please make sure your data in EIDITH is up to date.

2. Success stories, Challenges, and Outbreaks: Here is where we "shine". On **"Success Stories"**, please do your best to share successes in particular. We should be able to capture at least one noteworthy success story from each country since all countries are pushing hard on data collection and testing. A few pointers: it's OK to highlight meetings as a success if PREDICT played a key role in the organization of the event and if the meeting had a tangible outcome (e.g., disease ranking, OH strategic plan development, etc.). Training successes are in demand but Mandy and team requested more clarity and details on who was trained (in particular ministry or gov staff from national to subnational levels) and what they were trained in (since many of our trainings are so vast, we need to do a better job describing what actual skills or techniques were taught or improved). Also great to capture any requests for support (training, testing, procurement or supplies like PPE, outbreaks, etc.) from ministry partners, this shows value added from USAID backed projects.

For **"Challenges"** please try to keep these to critical challenges, not operational ones.

"Outbreaks" is pretty self explanatory. Any and all details we can feature here are really appreciated and almost inevitably shared beyond these reports by USAID. Perhaps a summary of events and impact from the last version of any relevant "outbreak forms" is the best approach.

3. Photos: Striking images of field work, lab teams etc. are all in demand (please make sure teams are in appropriate PPE). No need to share pics from meetings. For photos, please embed the image directly in the Word template and provide a caption and credit just like in the template. I'll likely follow-up to get the original image files for the best as we've been sharing photos with USAID in a Team Drive.

Please let me know if you have any questions and I'm happy to help however I can.

David
